

**Short Specification:**

Louvers International Wire Guards are constructed from tempered steel wire and welded into a rectangular grid pattern of 2" x 2 1/2" for the ultimate in protection. The standard length of 47 3/4" allows for clearance of end panels so you can protect one or an entire strip of 4 foot fluorescent light fixtures.

Mounting options include direct attachment with our special clips or hinged attachment allowing a swing-away guard for ease of maintenance. Also available in a light-duty 14 gauge wire or heavy duty 11 gauge wire suitable for almost any environment where fluorescent light fixtures are exposed to forceful contact. These high quality wire guards are protected with a durable and weather -resistant powdercoat epoxy and then finished in polyester chrome or white. Other colors and finishes are available as special order.

Because of the many options available to you with this product line, please call your Louvers sales representative today for additional information.
