

**Short Specification:**

Don't buy a new fixture just because the old diffuser is damaged or discolored. The Frameless Lens is a custom fabricated assembly that allows you to replace the diffuser in your frameless lens fixture for the fraction of the cost of a complete fixture replacement. Because the Louvers International Frameless lens is custom made for every application, you can be sure it will fit. If you want to change the look of your lighting, you can replace all of the lenses for a complete new look. Our standard diffuser is made of .110" Pattern 12 Acrylic or we can custom make your Frameless lens from any of the diffuser materials that we carry. (See the Premier Series.) Please call your Louvers sales representative today for additional information.
