

### Short Specification:

Louvers International's Wrap-A-Louver brings economy, efficiency and performance to the retrofit aspect of the lighting industry. For the first time since the introduction of the parabolic louver, an assembly system has been created which converts fluorescent wrap-around diffusing covers into modern low-glare high efficiency parabolic lighting.

Our Wrap-A-Louver system is designed to use any of our Para Image series parabolic louvers and can be supplied with or without end plates to offer maximum versatility. This system uses the existing fixture rails for installation or can be used with the specially designed mounting clips that allow for attachment to virtually any fixture. Please call your Louvers sales representative today for additional information.

### Ordering Information:

#### ORDERING PROCEDURE:

Access your fixture and record the following information. Then, call Louvers International to place your order.

- A. **OVERALL WIDTH** - Measure the width of the fixture from edge to edge.
- B. **OVERALL LENGTH** - Measure from end to end along the edge.
- C. **CHOOSE LOUVER** - See the Para Image section of our website.
- D. **CALL LOUVERS INTERNATIONAL** - For a precise fit, send the fixture to Louvers International or consult a Louvers International sales representative to measure and help you determine how this product can best fit your needs.
